ALBIOMA

SAFE WORK METHOD STATEMENT (SWMS)

In order of priority:

- **ELIMINATION** – Remove hazard completely.
- **Substitution** – Replace object /process with less hazardous one.
- **Isolation** – Isolate the hazard (i.e. separate the hazard from the people).
- **Engineering** – Modify a process (i.e. redesign a workstation).
- **Administration –** Use procedures /systems to minimise the risk (i.e. Rotation of employees, implementation of a safe work method, training, etc).

6. **Personal Protective Equipment (PPE)** – use to try to protect the person.

RISK SCORE CALCULATOR

	High	High	Extreme	Extreme
	Mod.	High	Very High	Extreme
	Mod.	High	Very High	Very High
	Mod.	Mod.	High	Very High
	Low	Low	Mod.	High
	MINOR	MODERATE	FATAL	CATASTROPHIC

Residual Risk	Action Required
Low	Ok for now. Continue to monitor.
MODERATE	Determine if remedial action/treatment is required.
HIGH	Immediate decision required by site leadership. Identify and commence remedial action with appropriate priority.
VERY HIGH	ACT NOW. Requires immediate attention by site leadership. Address the risk without delay. Requires urgent attention and clear, timely action plans to reduce the risk before proceeding.
EXTREME	ACT NOW. Requires immediate attention by site leadership. Urgently address the risk. Requires immediate resolution with focused attention until resolved.

Identify task high risk workplace hazards - *Non routine work is work not documented in a Safe Operating Procedure (SOP)* or Work Instruction

Note: If machine isolation is required, workers must be competent in the relevant isolation procedure.

EXTREME & VERY HIGH RISK HAZARDS	Risk	MAIN RISKS / PERMITS REQUIRED
1. Entering a Confined Space.	E	• Heat exhaustion, engulfment, limited access/egress. • Asphyxiation – low O_2 or contaminants. **(Confined Space Entry Permit required)** • Explosive atmosphere, combustible dusts **(Confined Space Entry/Hot Work Permits required)**
2. Work in an area which may have a contaminated or flammable atmosphere.	E	• Fire / explosion from ignition source. **(Hot Work Permit required)** • Asphyxiation or poisoning from contaminated atmosphere. **(Confined Space Permit)**
3. Work with potential for a fall from 2m or work on a roof	E	• Falling worker/object ≥2m requires SWMS.
4. Hot work required. (Oxy cutting, welding, soldering, grinding, etc).	E	• Fire or explosion from ignition source. **(Hot Work Permit required)** • Injury caused by hot surface, grinding wheel ejected pieces, welders "flash", etc. Fire inside Expanded Polystyrene (EPS) wall panels **(Hot Work Permit required)**.
5. Hand dig >200mm OR ground penetration >200mm OR mechanical earthworks OR enter a trench >1.5 M deep (excavating is Construction work)	E	• Contact utilities – electricity, water, gas, communications. **(Excavation Permit required)** • Trench Collapse. **(Excavation Permit required)**
6. Non routine electrical, high voltage or 'live' work or work near electrical installations.	E	• High voltage is >33kV. • 'Live' work is when electrical equipment is worked on energised – **(Management Approval Required)** • Electrical cabinets or MCC identified as **Red**
7. Non routine work involving mechanical lifting, lowering, pushing or pulling.	E	• High mechanical force damage / injury. • High risk work licence for use of cranes, mobile plant, scaffold, dogging, etc.
8. Using high risk tools with excess noise, kickback, cutting edge, high speed/pressure, ejected material, weight, awkward posture, explosive force.	E	• Injury from use of high risk powered or hand tools. • Electrocution, burn or electric shock. • Manual task injury from weight, forces, overexertion, repetition or poor work heights.
9. Demolish / alter load bearing / integral part of a structure 6m high OR use load shifting machinery on a suspended floor OR use explosives. Includes modify handrail / floors.	E	• Being struck or crushed by parts of a structure or exposure to asbestos, lead, hazardous chemicals etc. **(Demolition License and/or asbestos removal licence and Safe Work Plan required)**
10. Work inside fences / barricades / enclosures where moving / rotating machinery is operating or hazards may exist.	V	• Serious bodily injury caused by contacting moving/unguarded plant or materials. • Machinery starting unexpectedly or electrocution, burn or electric shock.
11. Potential or stored energy which cannot be isolated (electrical, hydraulic, pneumatic, kinetic).	V	• Electrocution or entrapment. • Machinery entanglement / injury.
12. Work on or near a pressurized or enclosed circuit (water, pneumatic, hydraulic, hot oil, etc).	V	• Fracturing the mains or piping from contact – spills / leaks / emissions (environment). • Contacting temperature extremes.
13. Working in artificial temperature extremes or weather extremes. Hot, cold, wet, icy, lightning, high winds.	V	• Electrocution from using power tools / leads in wet conditions or lightning. • Heat stroke / Heat Exhaustion / Fatigue / Frost bite / Hypothermia / Influenza. • Slip / Trip / Fall Hazards.
14. Hazardous manual tasks or excessive noise or excessive vibration.	V	• Personal injury/illness or hearing loss.
15. Using a hazardous chemical – chemicals, heavy metals, asbestos, Lead.	V	• Exposure to hazardous chemicals. • Spills / leaks (environmental).

16. Work on or adjacent to road, rail line or water body.	v	• Being hit by passing traffic or drowning.
17. Work on or near a chemical, glue, fuel, oil or refrigerant line / system.	v	• Contact chemicals (contamination, injury, etc). • Fracturing the line from contact – fire or explosion from ignition source – spill / leak.
18. Changes to software control system.	v	• Change to way plant / equipment operates & workers not retrained.
19. Other *(Specify)*:		

SWMS Title: replace incline screw and Trough		
Prepared By:		**Date:**
Business Name:		**Site:**
Operational From: am/pm	**To:** am/pm	
Description of Task:		**Work/Project Location:**
Reason for analysis: ☐ New task/plant ☐ High Risk Task ☐ Change ☐ Regular review ☐ Post-Incident ☐ Contractor (to complete) Task ☐ Non-Routine Task ☐ Maintenance/Repair ☐ Other *(specify):*		
SWMS Team Names: 1.	2.	3.
4.	5.	6.

Permits Required: ***(circle)*** Confined Space ☐ Risk of Falls ☐ Excavation ☐ Hot Work ☐	**PPE Requirements:** ***(circle)***  Other:___________________________

Potential Environment Hazards *(circle)*		**Fire/Emergency Response Equipment**		**Special tools or Equipment Required** *(e.g. gas detection, ventilation fans, lighting, scaffolding etc.) List*	
Noise pollution ☐	Soil erosion ☐	1. First Aid Kit *(Location)* _*Maintenance w/shop*_ 2. Communication method/details Verbal, 2way radio, landline phone 3. Fire hose 4. Other: _________________________		Welder, grinder, mobile crane	
Air pollution dust/smoke ☐	Hazards to flora & fauna ☐				
Spills to ground ☐	Spills to water ☐				
Hazards Identified					
Electricity ☐	Hazardous Chemicals ☐	Pressure (air, water, gas) ☐	Biological ☐	Hot Work ☐	Person/Object Falling ☐
Machinery & Equipment ☐	Lighting ☐	Ignition Sources ☐	Psychological ☐	Confined Space ☐	Traffic/Mobile Plant ☐
Hazardous Manual Tasks ☐	Dust and or fume ☐	Extreme Temperatures ☐	Radiation ☐	Noise ☐	Excavation/ Penetration ☐
Other workers/people					Stored Energy ☐

Key Steps in Logical Order		Hazards/Risks to Workers or Public	Risk Score	Control Measures	Residual Risk Score
1.	Isolate power / disconnect motor	Electric shock. Unexpected start-up. Stored energy.		-Complete isolation request form. - Isolate electrical supply at MCC. - Apply lockout/tagout. - Verify zero energy before work starts. - Disconnect motor only after isolation confirmed.	
2.	Remove guards and covers	Pinch points. Dropped tools or components. Manual handling strain. Exposure to moving parts if isolation is not effective.		- Confirm isolation and lockout/tagout is in place prior to removal. - Remove guards and covers using correct tools. - Support guards during removal to prevent dropping. - Keep hands clear of pinch points. - Place removed guards and fasteners in a designated safe area. - Maintain good housekeeping to prevent trip hazards.	
3.	Unbolt Trough at each end	Pinch points. Manual handling strain. Dropped components.		Use correct tools and lifting aids. Support components before removing bolts. Keep hands clear of pinch points. Gloves to be worn if required	
4.	Use crane to remove the trough and screw.	Dropped load. Crushing injuries.		-Crane operated by licensed operator only. -Lift plan completed and reviewed. -Use rated lifting points, slings and shackles. -Dogman/rigger to direct lift. -Establish exclusion zone. -No persons under suspended load.	
5.	Remove end plates with bearings and gear box.				
	Reinstall screw, end-plate, new bearings and gear box.				
6.	Use crane to reinstall new trough and screw	Dropped load. Pinch points. Misalignment.		-Inspect lifting gear prior to use. -Maintain clear communication between crane operator and dogman. -Hands kept clear during alignment. -Secure components before releasing crane	

7.	Refit guards and covers	Pinch points. Incomplete guarding. Dropped tools.		-All guards and covers refitted and secured -Visual check completed before removal of barricades -Tools and materials removed from work area.	
8.	Re-bolt Trough at each end				
9.	Connect power	Electric shock. Incorrect wiring. Unexpected movement		-Electrical work completed by authorised personnel only. -Confirm mechanical installation complete before connection. -Guards and covers refitted prior to energising.	
10.	Housekeeping and close-out	Slips and trips. Poor housekeeping.		-Clean up spillage and debris Remove waste materials from area - Report defects or follow-up work required - SWMS signed off	

Attach additional pages if required

All relevant workers to be consulted during this process and made aware of the control measures and all required permits identified.
