| <b>Description of Task:</b><br>Carry out inspection, fault finding, cleaning and repair of the tail-end assembly on the sawdust and shavings conveyors. The task includes isolating the conveyor, removing guards and inspection covers, clearing fibre build-up, carrying out repairs using hand and power tools, completing controlled test runs where required, reinstating all guarding and returning the conveyor to service. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                         |

### SAFE WORK METHOD STATEMENT (SWMS)

| Potential Environment Hazards                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Fire/Emergency Response Equipment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

### CRITICAL CONTROLS

The following critical controls must be in place and verified before work starts.

| # | Critical Control (must be in place before work starts)                                                                                                                     |
|---|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Isolation and Lock Out – Isolate all energy sources, apply personal locks and tags, and verify zero energy before any work begins.                                         |
| 2 | Safe Access and Working at Height – Use approved access platforms and ladders, maintain three points of contact and prevent dropped objects.                               |
| 3 | Controlled Test Running – Remove all personnel from the hazard zone before energising the conveyor. Communicate with the work party and conduct controlled test runs only. |
| 4 | Guarding and Reinstatement – Refit all guards, covers and fasteners before returning the conveyor to normal operation. Never operate with guarding removed.                |
| 5 | Manual Handling and Tools – Use correct lifting techniques, inspect tools before use and use the correct equipment for the task to prevent strain and injury.              |

**If a critical control cannot be implemented, work must stop and the SWMS must be reviewed before proceeding.**

**SAFE WORK METHOD STATEMENT (SWMS)**

| Key Steps in Logical Order |                                                                                                           | Hazards/Risks to Workers or Public                      | Risk Score      | Control Measures                                                                             | Residual Risk Score |
|----------------------------|-----------------------------------------------------------------------------------------------------------|---------------------------------------------------------|-----------------|----------------------------------------------------------------------------------------------|---------------------|
| 1.                         | Gather up tools, place in bucket and connect to rope swing.                                               | Manual handling, over filling bucket.                   | <b>Moderate</b> | - Use proper lifting techniques,<br>- limit bucket weight.                                   | <b>Low</b>          |
| 2.                         | Climb the access ladder to the top and pull up tools.                                                     | Slips trips, falls                                      | <b>Moderate</b> | - Use 3 points of contact,<br>- inspect ladder before use.<br>- 3 points of contact          | <b>Low</b>          |
| 3.                         | Inspect the conveyor.                                                                                     | Potential entrapment, sharp edges, residual energy.     | <b>Moderate</b> | - Ensure conveyor is isolated,<br>- wear gloves and PPE.                                     | <b>Low</b>          |
| 4.                         | Isolate the conveyor belt                                                                                 | Unexpected start up                                     | <b>High</b>     | - Lockout/tagout using isolation procedure<br>- Test for zero energy<br>- Apply lockout tags | <b>Low</b>          |
| 5.                         | Using tools located shavings 2 tail end. Remove any remaining plastic bolts or nuts to open the tail end. | Inspection hatch drop, sharp edges.                     | <b>Moderate</b> | - Support hatch<br>- Wear gloves<br>- Remove items with correct tools. (impact driver)       | <b>Low</b>          |
| 6                          | Connect airline to air fitting on guard to clear the roller from as much sawdust as possible.             | Air pressure hazards, flying debris.                    | <b>Moderate</b> | - Wear face/eye protection<br>- Ensure hose is connected<br>- use controlled bursts.         | <b>Low</b>          |
| 7                          | Un-isolate the conveyor belt<br>Ensure all personnel are at a safe distance and run the belt.             | Unexpected movement of belt, proximity to moving parts. | <b>High</b>     | - Confirm area clear<br>- Communicate with team<br>- Stand clear before restarting           | <b>Moderate</b>     |
| 8                          | Again, Isolate the conveyor belt.                                                                         | Unexpected start up                                     | <b>High</b>     | - Lockout/tagout using isolation procedure<br>- Test for zero energy<br>- Apply lockout tags | <b>Low</b>          |
| 9.                         | Inspect the tail end between the roller and belt for fibre build up.                                      | Fibre entrapment, sharp edges.                          | <b>Moderate</b> | - Use hand tools,<br>- Avoid sharp edges,<br>- Wear gloves.                                  | <b>Low</b>          |

### SAFE WORK METHOD STATEMENT (SWMS)

|     |                                                                                                           |                                                         |                 |                                                                                                                                                                                                                              |            |
|-----|-----------------------------------------------------------------------------------------------------------|---------------------------------------------------------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| 10. | Open the inspection hatch on the side of the conveyor.                                                    | Pinch points, trapped limbs, falling objects            | <b>Moderate</b> | <ul style="list-style-type: none"> <li>- Use tools safely,</li> <li>- Wear gloves,</li> <li>- Clean and organised work area</li> <li>- Kick toe boards</li> </ul>                                                            | <b>Low</b> |
| 11. | Drill out between the sections of the tail end roller.                                                    | Falling objects, Flying debris, noise, sharp fragments. | <b>Moderate</b> | <ul style="list-style-type: none"> <li>-Wear hearing and eye protection</li> <li>- use correct drill bit and speed.</li> <li>- Maintain clean and organised work area,</li> <li>- kick toe boards</li> </ul>                 | <b>Low</b> |
| 12. | Close tail end cover.                                                                                     | Pinch points, incorrect sealing, Falling bolts          | <b>Low</b>      | <ul style="list-style-type: none"> <li>- Ensure proper fit and seal</li> <li>- Secure all bolts/nuts.</li> </ul>                                                                                                             | <b>Low</b> |
| 13. | On completion, run Conveyors at 10% for a few mins, then set speed back to 100%.                          | Unexpected movement, equipment failure                  | <b>Moderate</b> | <ul style="list-style-type: none"> <li>- Stand clear during testing,</li> <li>- Monitor operation closely,</li> <li>- Adjust speed gradually</li> </ul>                                                                      | <b>Low</b> |
| 14. | Remove all tools and exit. Lower tools down via the Rope Swing. Note in diary if there were any problems. | Dropped tools, manual handling, poor communication      | <b>Moderate</b> | <ul style="list-style-type: none"> <li>- Use rope swing with control</li> <li>- use proper lifting</li> <li>- communicate exit clearly</li> <li>- record issues</li> <li>- Maintain clean and organised work area</li> </ul> | <b>Low</b> |

\*Add additional job steps, hazards and controls as required\*

All relevant workers must be consulted during the development and review of this SWMS and made aware of the control measures and all required permits. Worker consultation and sign-on are recorded through the online SWMS Register.

### ONLINE SWMS MANAGEMENT

Worker sign-on is completed through the online SWMS Register.

Workers are required to read and sign onto this SWMS once per review period, or sooner if the SWMS is revised, superseded, or changed due to an incident, equipment change, procedure change, legislative change, or risk assessment review.

Before each task commences, the team or person in control of the work must review the SWMS through the online task review system and confirm whether anything has changed from the approved SWMS.

If no changes are identified, the task may proceed once all workers are confirmed as current against the required SWMS.

If changes are identified, the changes and additional controls must be recorded in the online Task Record before work proceeds.

Supervisor review is required where the change affects the work method, plant, equipment, location, hazards, permit requirements, or critical controls.

### System of record

This Word document is the controlled master SWMS. The PDF is the worker-view copy. The HTML tablet page is used to view the SWMS and complete the task review.

Worker sign-off is stored in Worker\_SWMS\_Register. Daily task reviews are stored in Task\_Records. Review dates and version status are controlled in SWMS\_Library.
